PRODUCT DESCRIPTION

ClassicBond EPDM Kerb Joiners provide a sleek and stylish finish to any roofing project. Furthermore, its low profile allows for a seamless style and is an essential roofing component. Kerb Joiners are used to secure the edge of the roof where water does not drain into the gutter. This trim acts as a barrier to water at the edge of the roof. Suitable for both professionals and DIY enthusiasts, our kerb joiners are versatile and incredibly easy to install.

ClassicBond EPDM Kerb Joiners are durable, yet lightweight, therefore decreasing the risk of damage to your existing rubber roofing components. Better yet, there is no need to pin your kerb joiner into place, allowing added ease and convenience.

These components make the detailing of roof perimeters fast and easy saving the need & time of trying to manufacture neat corners on site. Corners are either glued or fixed in position.
