PRODUCT DESCRIPTION

ClassicBond Gutter Trim Internal Corner PVC has been manufactured to provide a perfect fit to the trims while featuring a low profile for a seamless finish. These products come with a built-in PVC-u batten which replaces the need for a standard wooden batten. This is great as it makes this product highly resistant to rot and other issues that would otherwise plague wood.

Gutter Trim Internal Corner's ensures that, when water runs off the roof, the membrane is secure. Providing a sleek, stylish and professional looking appearance to any roofing installation or system, this drip trim corner is the obvious choice.

As you would only expect from one of the industry's leading brands, our ClassicBond Gutter Trim Internal Corner is comprised of the highest quality materials to ensure a superb, yet secure, roofing feature. With its simple design, this product allows for a quick and straightforward installation process, therefore making it a cost and time effective option.

These components make the detailing of roof perimeters fast and easy saving the need & time of trying to manufacture neat corners on site. Corners are either glued or fixed in position.
